SCIENCE PROGRAM**

Environmental Science Bachelor's Degree Program

What is it?

The Environmental Science bachelor's degree is an interdisciplinary degree that draws upon the expertise and resources in the Departments of Biology, Chemistry, Physics and Geology, and Mathematics.

It provides students with a broad foundation in the sciences and specialized knowledge in environmental biology, chemistry and geology.

The program prepares students for careers in government, consulting, and industry, and for graduate school.

An especially effective and marketable skill that will be developed in this program is the use of Geographic Information Systems and Remote Sensing techniques, which allow scientists and planners to map, analyze, and predict environmental scenarios.

Careers for Environmental Scientists

Employment opportunities include state and federal agencies charged with monitoring and managing the environment, environmental consulting firms, and industry positions in air and emissions monitoring, pollution prevention and remediation, and safety and health.

The degree program in Environmental Science offers students an opportunity to obtain employment immediately without having an advanced degree.

Environmental Science employment is expected to grow at a very fast pace because of the public's growing awareness regarding environment, pollution and depletion of natural resources. Job growth for environmental scientists should be strongest in government, industry and private consulting firms. This demand will be driven by public policy, which obliges companies and organizations to comply with complex environmental laws and regulations, particularly those dealing with climate change, environmental conservation, pollution, natural resources and their uses, contamination and depletion of natural resources, waste management, and sustainable development.

Students that are bilingual in English and Spanish are especially attractive to multinational firms conducting business in Mexico, Central America and South America.
